

Newfield, N. J. Sep. 11. 1903

My Dear Colleague

I inclose a fungus on Vicia truncata
found in Nebraska, U.S.A. by Rev.
J. M. Bates, no. 2904.

There two kinds of spores - Brown,
muriform conidia on short basidia
closely comacted & forming black
spots on the leaves - and fusoid,
hyaline conidia of which I do not
see the origin.

I should be glad to have you
determine & name it

Very truly yours

J. B. Ellis
