

50. Naematelia on Castanea
Apr. 1880

51. On dead oak limbs
Common. Subauric
uliform or cupuliform
when fresh Tremella foliacea?
Color when fresh paler
- rufo-brunnea.

52. On fading leaves of
Geranium Carolinianum
May 1880 & 1881. Pestatorzia
cornigera Muhl. Perhaps
the type of a new genus.

53. Ad culmos putrescentes
graminum. (Mollinia hydrophila (Kunt.)

54. On wood of Cupressus thyoides

55. On leaves of *Prinos*
rigida. Newfala M. Jersey
May 1880.

Dactylidia pinastri Nuhn
— possibly = *Microthyrium*
pinastri Fickl. but Dr.
Winter to whom I have also
sent sent spec. thinks
this can not be *M. pinastri*
Fickl. but thinks it may
be a "*Sphaerella*" or "*Didymos-*
phaeria". I am uncertain
about it & leave it to you.

56. is a curious little thing
on a fallen pear leaf - I have
divided it - *Myxogaster*?

Cents. XV and XVI

My co the ~~see~~ varieties received

Newfield N. Jersey
June 3rd 1881

Dear Sir

I send you with this
by mail Cent. VII. N. Am.
Fungi in which I have
enclosed a few specimens
nos. 50—56 which I would
like to have you examine

If you desire it I will
continue to send the
N. Am. Fungi in exchange
for your publications
& will pay you whatever
balance there may be
in your favor in cash

With thanks for your
courtesy & best wishes
for your success

I am very truly

Yours J. B. Ellis
