My Dear Sir

Your card of Mar. 16. has
come to hand. You are
evidently right. I had
overlooked *Myriococcum*.
We will call it if you
please *Myriococcum Everhartii*.
Sacc. & Ell.

I am glad to hear that
your *Sylloge* is prog-
ressing so well. It will
be a very valuable work
& I hope you will have
many subscribers.

If you can find time
I would like to have
you look at the enclosed
spec. on *Sorghum nutans*.
It appears to be near
others

Hymenella or Hymenista
But does not properly come
under that genus.

I wish you would also
look at nos. 67 and 68
from Utah -

68 I take to be a species
of *Rufinica* (*R. Utahensis*, *n. sp.*)
I do not know what
to make of 67. It has
something the habit of
Peticularia but I am
not sure that it is a
Myxogaster at all.

3574 is also a curious
thing. If any of these can be
referred to a new genus
make it Everhartia.

Very truly Yours

J. B. Ellis

I shall send you
soon.

N. A. B. VIII. & IX.
