

BOTANIC GARDEN,

CAMBRIDGE, MASS.

My Dear Professor,
Dr. Saccardi.

Since your letter
of Dec. 28, was received
I have endeavored to
learn more of the
Cundurango. I
know nothing myself
but have thought
that it was ~~altogether~~
all what we call
a numbing.

The Conduct of Dr.
Bliss and T. Kleene
is not favorable to their

Complete honesty

I have now seen
Dr. Parry, who has
had the plant des-
cribed to him by
the collector, as having

Mucos lacteus

Fructus follicularis

Floris umbellati?

Semina comosa

He has seen the
stems: Caulis volubilis

So probably Asclepi-
adaceae,

So far as I learn,
it has proved to have
no effect at all
upon Cancer.

That is the opinion
of the faculty here -
so far as I can
learn.

I was gratified
at receiving a letter
from you, and should
be glad if I could
render you any real
service. I gratefully
remember your kindness
to me at Padua,
and I beg to be kindly
remembered to Professor

Visi anni.

I have not been
very well of late, -
and cannot write as
fully or ~~legibly~~ as
legibly as I wish.

Believe me to remain
Dear Sir

Very truly Yours

Asa Gray
