

Your Peziza is nearest to Per.  
Carbonaria A+S - but it can  
hardly be that species, I know  
of no species with 'cupula extus  
'pustulata' - to which it can be  
referred. Some Spor: '016-017 x  
0075-008 mm. - It is allied to  
P. catinoides & the P. pulchra Gr  
P. tarzetta C. but it can be  
none of these.

Please inform me what name  
you apply to it that I may so  
call it in my herbarium

London, <sup>July</sup> Pez. tuberculosa McCooke  
S. & C.
