

The New Gardens Herbarium purchased Balansa's  
Fungi - between 2700 and 4800.

The collection consists of a few specimens  
with names, the majority are without names  
- when purchased (1885) it was stated  
that a list of all the names would be sent.  
This has not been done.

I have none of Spegazzini's "Fugilli"  
and do not know how to get them. If they  
can be purchased for the New Library, or  
lent so that the names of determined  
species may be seen, I would then soon  
determine the residue, but I would never  
attempt to examine and describe them  
until I know how many and what of  
them are determined by Spegazzini  
ellMooker
