

Department of Agriculture

(Pathologist's Branch),

Melbourne, 16/6/ 1896

My Dear Sir,

I enclose two specimens of Orange leaves with a sort of 'scab' upon them which is spreading very rapidly. Perhaps you may know the disease or if not would you kindly determine it.

The growers here are very anxious to know what it is & I should be pleased to know at your earliest convenience

With kind regards

Yours faithfully
J. M. Alpine
