

State Hall
Albany, N.Y. Mar. 23^d 1886

Prof. P. A. Saccardo

My Dear Sir;

I inclose
to you, for name, a specimen
of a fungus (Hyphomycetes) found
growing on a pine-apple squash,
Cucurbita moschata. It forms a
soft felt or cotton clouded by the
brown spores or conidia. It is
a curious thing and I am not
able to locate it.

Very truly Yours
Chas. H. Peck.
