THE TECHNOLOGICAL MUSEUM,
HARRIS STREET,

SYDNEY, 26th. February, 190³.

Dear Sir,

I have recently carried out a research on the Australian Eucalypts and as I am anxious to obtain herbarium material of all the representatives of this Genus acclimatised outside of this Continent in order that the new data obtained by this investigation should be made known to all under whose care these trees are now cultivated.

I write therefore to ask if you would kindly send me herbarium material (leaves, buds and fruits) of those Eucalypts acclimatised in your district, and if you could undertake this duty for me I should feel extremely obliged, and would send you in return seeds of those not in your list but which I think would be suitable for your climate.

Thanking you in anticipation.

Yours truly,

Rich. T. Baker
