

Dec. 26. 1. 144

Dear Sir,

I am much obliged to you for your card
& for calling my attention to the note in your
Sylloge XXII p. 769. I have however seen
this note, but hardly feel certain if H. paradoxa
can be united with A. Tonduzi. We have
authentic specimens of the latter, & it is a
very fine plant much larger than A. dominica,
& up to 5 mm in diam. Your plant paradoxa
appears to be a small, almost sphaerical species
agreeing with ^{more} A. glomerulosa. Yrs very truly
A. Cotton
