

## DEPARTMENT OF AGRICULTURE,

PATHOLOGIST'S BRANCH,

Melbourne, 16<sup>th</sup> April 1906

My Dear Sir

I have much pleasure in sending you a copy of my work on 'The Rusts of Australia' in which you will see that there are considerable changes from the records given in Cooke's 'Handbook' published in 1892. In several cases the life-histories have been completed & I am particularly pleased to have settled that Goehelia polita of Berkeley is only the aecidial stage of Uromyces politus, both on Myehlebeckia cunninghamii. Perhaps you might consider the work worthy of some recognition & if so I could send it to any Institutions you might suggest.

I remain  
Yours faithfully  
J. M. Alpine

Prof. P. A. Saccardo.
