

No. _____

Pathologist's Branch,

440 LONSDALE-STREET,

Melbourne, 1st Dec. 1909

My Dear Sir,

I take the liberty of sending you leaves of Quercus coccineus with a Phyllosticta upon it which resembles your P. quercus but the elongated spores are characteristically pointed at each end. I should be pleased to know if this species exists with you, & if it does much damage to the leaves, as it seems to do here

With kind regards

Yours faithfully
J. McAlpine
