Sept. 17. 1913.

Dear Prof. Dr. Saccardo,

I write to ask whether you can send me this autumn some living examples of Humulus Lupulus, which I am told grows plentifully near Padova. I am interested in breeding varieties of hop, and I should be very grateful if you could send me (1) cuttings from the rootstock, or portions of the rootstock, of wild male and female plants of H. Lupulus; and (2) ripe seeds H. Lupulus. (about 1000 seeds) of wild plants of,

With regard to the living plants, there will be no difficulty in your sending them to England, as we have no Phylloxera regulations. Please address them to me, Agricultural College, Wye, Kent, England. I will, of course, send you the cost of postage.

Am I right in thinking that hops are not cultivated anywhere in Italy; and that consequently the true wild plant only occurs, - not mixed with any cultivated varieties?

With Kind regards. Yours Sincerely,
E. S. Salmon.
