E. S. SALMON, F.L.S.

Feb. 25. 1916.

Dear Prof. Saccardo,

Thank you for the identification of the Phomopsis  
cinerescens. We have proved, by means of  
inoculations with pure cultures, that it is a  
parasite. I note that you call it in your  
postcard "parasite et dangereuse".  
can you kindly give me any references  
as to its occurrence on cultivated Figs on the

Continent?

With kind regards, Yours sincerely,

I take pleasure in sending you  
my last "Report".

E. S. Salmon.
