(UNIVERSITY OF LONDON.)
SOUTH-EASTERN AGRICULTURAL COLLEGE,

WYE, KENT.

England.

July 8. 1914.

MYCOLOGICAL DEPARTMENT.

FROM
E. S. SALMON.

Dear Prof. Saccardo,

Will you kindly examine the enclosed specimen and tell me if it is your species Phoma cinerascens Saccardo. The spores appear to be ^{slightly} larger.

If it is your species, as I think it must be, can you let me have an example of the Diaporthe stage (D. cinerascens).

Also, where in your "Sylloge", ~~is~~ have you put Libertella ulcerata Massee, on Ficus.

Can you give me references to any work in Italy on fungous diseases of the Fig?

With kind regards.

Yours sincerely,
E. S. Salmon.
